

ADITYA MAULANA ZUNAI

Software Engineer

adityazunaidi115@gmail.com | +62 859 3150 4125 | Surabaya, Indonesia

PROFESSIONAL SUMMARY

5+ years building web and mobile systems across manufacturing, startup, and port logistics environments. Started with HR and attendance automation, moved into startup POS and CRM products, and now working on mission-critical port infrastructure — integrating legacy systems like SAP and .NET Framework with modern stacks like ASP.NET Core 8 and Flutter.

Comfortable in legacy codebases. Can read a PHP Native system from 2012 and ship a Flutter app the same week. Most of the work has been in environments where the cost of a bug is real — port operations, fuel logistics, enterprise HR — so production stability and clean documentation are not optional habits.

Strong in backend and integration work: Node.js, Laravel, ASP.NET Core, .NET Framework, and SAP/third-party device integration. Mobile side covered with Flutter and Java Android Native. Deployed on AWS, on-prem Ubuntu, and Docker setups depending on what the project called for.

EXPERIENCE

Developer | Pelindo Solusi Digital

Jul 2024 – Present

- Built and maintained mission-critical port logistics systems focused on scalable backend development and enterprise system integration.
- Developed applications supporting fuel logistics, port traffic management, container tracking, and multi-system communication (SAP, PTOS, PKK, TPS, TTL).
- Implemented robust error handling and performance optimization to ensure application stability in production environments.
- Designed system architecture and folder structures for maintainability and long-term scalability, with clear documentation for future developers.

Key Projects:

- Super Depo System** – .NET Framework system to manage container flow in and out of port depots, improving operational visibility.
- Pelra System** – Port system for documenting small vessel movements, cargo handling, and logging using .NET Framework.
- FUEL System** – Web application using CodeIgniter 2 to handle fuel (BBM) request workflows and reporting, integrated into port operations.
- APBS Reborn System** – Rebuilt legacy APBS using ASP.NET Core 8 for vessel permit requests, integrated with TPS, PTOS-M, PTOS-PK, PKK, and TTL.
- FUEL Mobile App** – Flutter app for mobile access to the FUEL system, enabling port staff to manage fuel operations remotely.
- IHUB Integration Platform** – ASP.NET Core 3 gateway handling JSON-to-JSON integration between internal systems and SAP.
- Integrator System** – .NET Framework tool to convert XML messages to JSON for legacy-to-modern system communication.
- Income Financial Application** – Fullstack web app managing corporate lending workflows for Pelindo Group and non-Pelindo companies, including submission, approval, and financial reporting modules.

Skills: C# .NET Framework ASP.NET Core JavaScript TypeScript Dart Flutter Docker Oracle PostgreSQL Node.js Express.js React

Fullstack Engineer | PT Tunas Kreasi Digital

Dec 2022 – Apr 2024

- Contributed to multiple startup-focused products including POS systems, customer loyalty platforms, and CRM tools across web and mobile.
- Built and maintained backend systems using Node.js, TypeScript, PHP Native, and CodeIgniter 3; developed mobile apps with Java Android Native and Flutter.
- Deployed and configured CI/CD pipelines on AWS (CentOS servers) to ensure stable delivery across environments.
- Improved Android app stability by optimizing memory usage and error handling, reducing frequent force-close crashes.

- Designed clean architecture and documentation structures to improve maintainability and reduce onboarding time for new developers.
- Implemented unit testing on the POS system to validate business logic accuracy.

Key Projects:

- **POS App for Bali Travel Startup** – Java Android app with Node.js backend for managing travel agent transactions.
- **POS System for Quipster** – Java Android app with CodeIgniter 3 and Node.js backend handling sales, stock, and reporting.
- **Customer Loyalty Website** – Flutter web platform for rewarding points and vouchers to customers.
- **Looyal App** – Flutter mobile app to collect and analyze purchase receipts.
- **Wooblazz CRM App** – Flutter-based CRM app to track sales team performance and attendance.

Skills: Java JavaScript TypeScript PHP Dart CodeIgniter Node.js React Flutter AWS GitHub CI/CD MySQL PostgreSQL Agile

Programmer & App Analyst | PT Indra Jaya Swastika

Sep 2021 – Nov 2022

- Designed and built multiple in-house web systems from scratch including leave/overtime management, container monitoring, and gate in/out reporting.
- Developed stable PHP Native applications optimized for low-maintenance structure and clear documentation in a legacy tech environment.
- Deployed all systems on an on-premises Ubuntu Linux server, handling full-cycle configuration and deployment.
- Integrated systems with SAP and third-party hardware (Hikvision) to synchronize operational data and provide real-time access reports.
- Applied unit testing and manual validation workflows to ensure reliability and reduce production bugs.

Key Projects:

- **Leave, Permission & Overtime System** – Web interface for employee time-off requests and approvals, integrated with PayBiz and SAP HR modules.
- **Container Monitoring System** – Real-time container status visibility for depot operations, synchronized with SAP data.
- **Gate In/Out Reporting System** – Integrated with Hikvision access control devices to monitor employee and visitor movement with comprehensive security reports.

Skills: Laravel PHP Native PostgreSQL Node.js Express.js JavaScript

Intern | PT Jayamas Medica Industri

Jan 2021 – Apr 2021

- Developed a web-based HR application using CodeIgniter and MySQL to automate employee attendance tracking.
- Integrated the system with fingerprint attendance machines to collect and process raw attendance data.
- Built modules for detecting incomplete or missing attendance records and generating detailed reports.
- Added features for employees to submit leave and overtime requests directly through the platform.

Skills: JavaScript CodeIgniter PHP MySQL

EDUCATION

Bachelor's Degree in Information Systems

2025

Institut Teknologi Adhi Tama Surabaya

Final Project: Built a comprehensive HR system using PHP (CodeIgniter) and MySQL. Processes attendance data from fingerprint machines, detects incomplete records, and includes leave and overtime request features.

- Off-site Attendance: employees can check in from outside the office via location tagging.
- Payroll Module: automates salary calculations based on attendance, overtime, and deductions.

Diploma in Information Systems

2021

Universitas Airlangga

Final Project: Web-Based Attendance and Leave Management System — HR-focused web application using PHP (CodeIgniter) and MySQL. Processes fingerprint machine data to detect incomplete attendance and handles leave and overtime requests.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Java, Dart, C#, SQL

Backend: Node.js, Express.js, Laravel, CodeIgniter, ASP.NET Core, .NET Framework

Frontend & Mobile: React, Flutter, Java Android Native

Databases: PostgreSQL, MySQL, Oracle

DevOps & Cloud: Docker, AWS, GitHub CI/CD, Linux (Ubuntu)

Integration: SAP, REST API, XML/JSON conversion, Hikvision, PTOS, TPS, TTL

Practices: Agile, Unit Testing, Clean Architecture, Technical Documentation
